

## Life Cycle Monitoring (LCM) Internship: Academic Credit Opportunity

Credit-earning work needs to occur during the academic term in order to be counted as credit. The 2023 academic term for SWOCC, for reference, is as follows: Spring (April 1 – June 13), Summer (June 19 – August 10), Fall (Sept 11 – Nov 22), and Winter (Jan 8 – Mar 21). We offer 1-3 credit hours per internship. Students will receive 1 credit every 33 hours worked. Interns are welcome to re-apply for multiple terms if interested in earning more credit (for a maximum of 12 credit hours per student). Internship duration is approximately 8-11 weeks, with a minimum 99-hour commitment (to receive full \$600 stipend). Field work is highly dependent on weather and stream conditions, so daily and weekly schedules are both flexible and susceptible to changes.

### Position Summary:

The Life Cycle Monitoring interns assist the LCM Program staff with biological monitoring (surveying and sampling) of juvenile and adult salmonids in the Coos basin. Interns also assist with youth programs (training the next generation of watershed stewards) and community outreach events. Duties will involve independent work.

### Position Responsibilities:

- Work with supervisors/coworkers to install, operate, and maintain field equipment
- Hike in and along streams to conduct spawning surveys
- Trap and tag juvenile salmon using seining nets and rotary screw traps
- Repair and maintain field gear and equipment (e.g., seine nets, waders, dry suits)
- Assist with other fieldwork, data collection, and salmon-related tasks
- Communicate regularly with supervisor(s)
- Mentor high school-aged youth
- Assist with CoosWA outreach events

### Preferred Qualifications:

- Ability to follow instructions and reliably work independently in the field
- Reliable transportation – site locations up to 20 minutes out of town
- Ability to maneuver rough terrain while collecting data
- Ability and willingness to safely work outdoors in all weather conditions
- Ability to commit to the full term of service for which you are applying
- Currently pursuing a degree in natural science (biology, forestry, fisheries & wildlife, environmental science, or similar field)

### Benefits:

Upon completion, interns will receive a \$600 stipend in addition to academic credits through their institution. Personal (independent) travel mileage will be reimbursed at the state reimbursement rate.

Interns at the Coos Watershed Association can expect to gain experience in:

- Conducting scientific field work in a stream environment
- Performing a variety of cutting-edge monitoring and surveying techniques
- Working with and maintaining field gear and equipment
- Developing an understanding of coho salmon life cycle, population levels, stresses, habitats, and management issues in Coos Bay
- Youth education and community outreach
